
Sustainability Policy

Version 1.0 | Effective 8 June 2026

Business Name	MHX Entertainment
Policy Owner	Matt Hall
Business Activity	Mobile DJ, sound and lighting services
Initial Baseline	0.122 tCO ₂ e (partial-period operational baseline)
Review Date	8 June 2027
Version	1.0

1. Our Commitment

MHX Entertainment recognises the environmental impact of travel, electricity use, equipment manufacture, purchasing and waste within the wedding and events sector. We are committed to proportionate measurement, practical reduction, transparent communication and continual improvement.

Our initial operational baseline is 0.122 tCO₂e for the period 1 December 2025 to 7 June 2026. This is a partial-period operational baseline and is not presented as a full-year footprint.

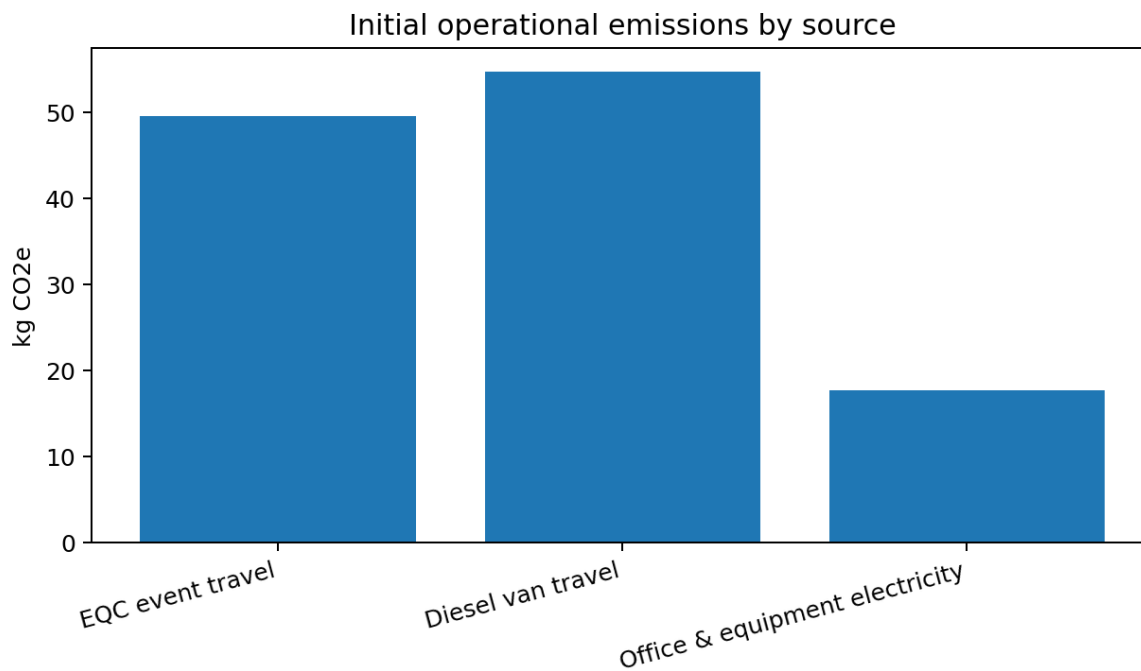

2. Reporting Scope and Method

The policy covers business travel, electricity attributable to MHX operations, equipment charging and testing, administration, purchasing, maintenance, batteries, waste, digital services, suppliers and subcontractors.

- Direct fuel emissions: diesel used for business van travel.
- Purchased energy: electricity attributable to electric-vehicle travel and other business operations.
- Wider value-chain impacts: proportionate consideration of purchased equipment, services, deliveries and waste. Selected equipment purchases are tracked separately and are not included in the 0.122 tCO₂e operational baseline where reliable product-specific embodied-carbon data is unavailable.
- Conversion factors: UK Government GHG Conversion Factors 2025.
- Data quality: recorded information where available, reconstructed route mileage and clearly stated estimates where direct records were unavailable.

3. Initial Emissions Breakdown

Category	Calculation basis	kgCO ₂ e	tCO ₂ e
EQC event travel	809 miles × 0.06127 kgCO ₂ e/mile	49.57	0.050
Diesel van travel	122 miles × 0.44866 kgCO ₂ e/mile	54.74	0.055
Other electricity	100 kWh × 0.177 kgCO ₂ e/kWh	17.70	0.018
Total	Initial operating period	122.00	0.122

4. Transport and Route Planning

- Use the Mercedes EQC for suitable events where equipment capacity, distance and charging arrangements permit.
- Use the Euro 6 Ford Transit Custom only where equipment load or operational requirements make it necessary.
- Plan efficient routes and avoid unnecessary or duplicate journeys.
- Use remote planning and meetings where an in-person visit is not required.
- Record mileage by vehicle for all future business journeys.

5. Operating Base, Solar Energy and Charging

MHX Entertainment operates from a base equipped with rooftop solar photovoltaic panels and electric-vehicle charging facilities. Electricity is supplied through an Intelligent Octopus Go tariff, with surplus solar generation exported through an Octopus export tariff.

- Use available solar generation for business and EV charging where practical.
- Use smart lower-demand charging where practical.
- Monitor imported electricity and exported solar electricity through available supplier data.
- Report exported electricity separately rather than treating it as an automatic offset.

6. Sound, Lighting and Equipment Efficiency

- Use low-wattage sound equipment and LED lighting appropriate to each event.
- Avoid unnecessary fixtures and oversized systems.
- Use rechargeable wireless lighting controls where suitable.
- Switch off equipment when not required and avoid unnecessary charging.

7. Equipment Lifecycle and Purchasing

- Maintain, inspect and test equipment regularly.
- Prioritise repair before replacement where safe and economically reasonable.
- Use protective covers, padded bags and suitable cases.
- Consider durable, repairable, used or refurbished equipment where appropriate.
- Reuse cables, packaging and storage materials wherever practical.
- Review suppliers for product durability, repairability and environmental credentials.

8. Paper, Waste and Batteries

- Maintain paperless routine administration.
- Use rechargeable batteries wherever technically suitable.
- Keep batteries and electrical equipment out of general waste.
- Use appropriate battery and WEEE recycling routes when disposal is required.
- Avoid unnecessary disposable décor and single-use products.

9. Social Responsibility and Local Impact

- Treat clients, guests, venue teams, suppliers and subcontractors fairly and respectfully.
- Provide an inclusive service and consider accessibility needs.
- Maintain appropriate insurance, PAT testing and safe working practices.
- Comply with venue sound limits, operating procedures and local requirements.
- Minimise disturbance during arrival, setup, performance and departure.

10. Current Actions and Forward Plan

Area	Current position	Next step
Travel	EQC used for all suitable events until van acquisition; van used where required	Record every journey and reduce diesel miles
Energy	Solar-equipped base, smart tariff and EV charging	Improve separation of business electricity data
Administration	Routine systems fully digital	Maintain zero-paper administration
Equipment	LED lighting, low-wattage systems and protective storage	Maintain repair-first asset register
Reporting	Initial baseline of 0.122 tCO ₂ e	Complete first 12-month baseline to 30 November 2026

11. Targets

- Complete and publish the first full 12-month baseline after 30 November 2026.
- Maintain 100% journey logging from June 2026 onward.
- Use electric transport for every suitable event.
- Set quantified transport and operational reduction targets after the full-year baseline.
- Review the policy and emissions calculation annually.
- Prioritise emissions reduction before verified offsetting.

- Reduce operational emissions by at least 15% by 2030 against the first complete 12-month baseline.

12. Governance and Transparency

Responsibility for sustainability strategy, emissions reporting and annual review rests with the owner of MHX Entertainment. Assumptions and estimates will be documented, and future reporting will improve as direct mileage, fuel and charging records become available.

MHX Entertainment will not claim to be carbon neutral, net zero, zero impact or emissions free unless there is sufficient evidence and a recognised basis for that claim.

Declaration

I confirm that this Sustainability Policy reflects the current operating practices, objectives and reporting approach of MHX Entertainment.
